Date - June 28th, 2023 - July 7th, 2023
Sprint goal - Set up core functionality of website.

Remaining work — Number of story points left to complete this sprint
Guideline — Ideal burn rate

Comments:

- **On planned velocity vs. previous sprint velocity:** Unfortunately, we forgot to do a story point estimation for sprint 1 and as such we cannot compare the planned velocity of this sprint to the velocity of the previous sprint. We did however complete much more work in terms of actual user story count compared to sprint 1.
- **On the burndown chart itself:**
    - Our actual velocity was not in line with the planned velocity, unfortunately. This was due to several issues involving recently updated packages such as NextAuth as well as issues with our database.
    - There was a significant completion of work towards the end of the sprint due to several pull requests not being merged until the last minute. In the next sprint, merging changes will be prioritized.
        - Another reason for this was due to some user stories having dependencies on other user stories. Team members were stuck with blockers but did not make them known in standups, which left the development process in limbo.
